ACTIVE WEATHER WARNINGS, WATCHES and ADVISORIES: http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER

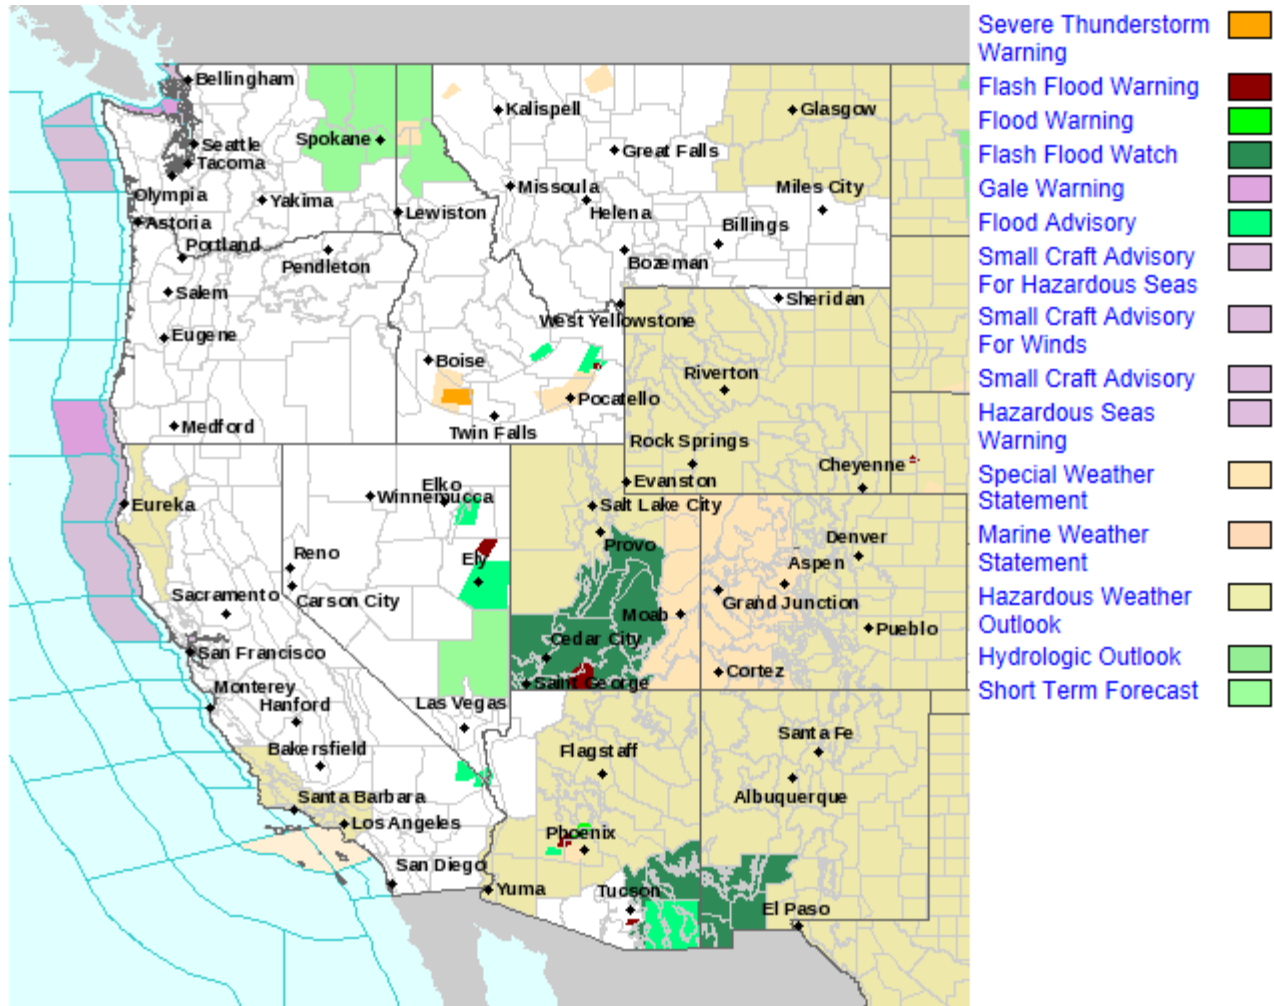

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA: A weather system moving through the Pacific Northwest today will bring the southern edge of a cold front across the region that will trigger more afternoon and evening thunderstorms across the northern mountains. Thunderstorms will mostly occur over Siskiyou, Modoc and northern Trinity Counties. Most of the storms will be quite wet, and that will decrease significant fire potential. Wednesday some lingering moisture over the northern mountains will likely produce afternoon cumulus clouds, but it will be quite a bit more stable so no thunderstorms are expected. Moist, unstable conditions are expected over the Sierra, so there will be a small chance of isolated afternoon and evening thunderstorms near South Tahoe and southward. After Wednesday, dry northern flow will return over the region and conditions will become seasonable without any significant fire weather expected. Some drainage bottoms and valleys are likely to begin seeing relatively good relative humidity recovery with mid and upper slopes possibly developing thermal belt conditions. The marine layer will continue to affect the coastal areas, but above that will be much drier and warmer in the coastal mountains.

SOUTHERN CALIFORNIA: An area of low pressure will slide down the coast today and should be near Point Conception this evening, and then over Southern California on Wednesday. There may be enough moisture and instability associated with this system to trigger a few isolated showers and thunderstorms over the region today and Wednesday (mainly over the higher terrain), but overall the big weather story will be the anticipated cooling trend during the next few days. High temperatures will be in the 80s across the inland valleys through Wednesday, with 60s and 70s in the mountains. Winds will be southwest to northwest 10 to 15 mph, except 15 to 25 mph and gusty through the desert passes today, with slightly lower speeds expected on Wednesday. The marine layer has risen to around 3,000 feet with low clouds and fog into the coastal slopes this morning, and this is likely to occur again on Wednesday. Thunderstorm chances may increase Wednesday and Thursday, particularly south of Point Conception as the center of the low moves across the southern part of the state. This system will exit the region on Friday with warmer and drier weather expected Friday into the weekend. Tropical storm Lowell, currently well off the southern Baja Coast is forecast to move northwest in the coming days and may begin to bring some moisture into the region by early next week.

CAL OES ACTIVATIONS

Cal EOC Incident – 2014 Drought

- The SOC is activated at Level 2 in support of the Drought State of Emergency from 0800-1700 hours daily.
- The Inland REOC is activated at Level 2 from 0800-1700 Monday through Friday or as needed.
- The Southern REOC is activated at Level 1.
- The Santa Barbara County OA EOC is activated at Level 2 to be handled by the duty officer for the purpose of monitoring activities and gaining situational awareness. The operational period is Monday – Friday, 0800-1700 hours.

Situational Summary

On January 17, 2014 Governor Edmund G. Brown proclaimed a State of Emergency and directed state officials to take all necessary actions to prepare for drought conditions. The State Operation Center (SOC) is activated to implement objectives in support of the Governor's priorities. The lack of winter rain and snowfall has resulted in extremely dry conditions in many parts of the State. Reservoir levels are down significantly from where they should be on average for this time of year. If conditions continue severe impacts to municipal water supplies, agriculture (plants and livestock) and firefighting capabilities are likely in store for the State over the next few months. Negative economic impacts will also result.

The drought could result in severe impacts to the municipal water supplies, wells, agriculture (plants and livestock) and firefighting capabilities for several months. The SOC continues to be activated to monitor the situation statewide, and support regional and local operational areas.

- Current Reservoir Levels continue to decline. Levels as of August 18th : Don Pedro 42%; Exchequer 18%; Folsom Lake 40%; Lake Oroville 33%; Millerton Lake 47%; New Melones 24%; Pine Flat 12%; San Luis 20%; Lake Shasta 32%; Trinity Lake 31%; Pyramid Lake 94%; and Castaic Lake 44%.

- Emergency Drinking Water Procurement and Distribution Planning Guidance (rev. May 2014)
Significant changes have occurred to the structure of California's state government organization. Rapid advances in systems, science, and technology have helped emergency managers improve coordination, forecasting, and situational awareness. Because of these changes, the *Multi-Agency Emergency Response Procedures for Potable Water Procurement & Distribution* document has been replaced by the *Emergency Drinking Water Procurement and Distribution Planning Guidance*. The intent of this guidance document is to clarify the roles and responsibilities of the stakeholders involved in locating, procuring, and delivery of emergency drinking water¹ to populations in California. Consequently creating a framework for agencies and organizations to work together to enhance preparedness.

Situational Summary

- State Board Mandatory Conservation Regulations Now in Effect: The state's first-ever emergency regulations mandating urban water conservation became effective will be in effect until April 25, 2015.
http://www.waterboards.ca.gov/waterrights/water_issues/programs/drought/emergency_regulations_waterconservation.shtml
- The 2014 Governor Drought Task Force continues to meet regularly to take actions that conserve water and coordinate state response to the drought.
- Cal OES continues to gather drought-related costs from state agencies and local governments.
